

Final Identity Lock

Consolidated verification of locked statements across the dissertation, slides, and defense materials

Companion to `main_full.pdf` and `defense_presentation.pdf`

1. Locked Dissertation Title

*Responsible AI Governance for Clinician Trust and Adoption
of AI-Assisted ASD EEG Screening*

Title appears in: `main.tex \thesistitle`; PDF metadata title field; defense slide 1; topic proposal page 1.

2. Locked Research Gap

Existing AI-assisted healthcare screening systems emphasize predictive capability and technical performance while insufficiently addressing governance-enabled clinician trust and operational adoption readiness.

Operationalized via the gap-table at defense slide 3; Chapter 2 contradictions / limitations matrices; Chapter 1 Problem Statement.

3. Locked Conceptual Framework (Causal Chain)

Plus H4 (Expl mediates Gov→Trust) and H5 (Trust mediates Expl→Adoption). Six causal hypotheses total. Theoretical anchors: TAM (Davis 1989), Trust in Automation (Lee & See 2004), Socio-Technical Systems (Cherns 1976).

4. Locked One-Sentence Research Identity (used for any “what is your dissertation about?” question)

This dissertation investigates how Responsible AI governance mechanisms improve clinician trust and operational adoption readiness in AI-assisted healthcare environments.

Defense slide 18 (Unified Doctoral Identity); Q&A guide section “The One-Sentence Identity”. Memorize verbatim. Use for opening introduction, “what is this about?” questions, and closing remarks.

5. Locked Final Doctoral Claim

Governance-driven perceived explainability significantly strengthens clinician trust and operational adoption readiness for AI-assisted ASD-EEG screening systems in healthcare organizations.

Chapter 5 Section “Final Doctoral Claim”; defense slide 19. Memorize verbatim. Use as the closing answer when committee asks for a one-sentence statement of what the dissertation defends.

6. Identity Check: Is this Dissertation About...?

Question	Locked answer
Is this AI architecture research?	No. Human-centered Responsible AI governance research.
Is this AI optimization research?	No. Adoption research, not performance research.
Is this a generic TAM study?	No. TAM is extended by positioning RAI governance as a structural antecedent.
Is this an AI ethics paper?	No. Empirical research with measured constructs and hypotheses.
Is this an enterprise transformation thesis?	No. Bounded organizational research within ASD-EEG context.
Is this a multi-agent / RAG dissertation?	No. Those are supporting technologies; the contribution is governance → trust → adoption.
It is...	Human-Centered Responsible AI Governance for Healthcare AI Adoption.

7. Consistency Map (Where Each Locked Statement Lives)

Locked statement	Where it appears (must be identical everywhere)
Title	main.tex \thesistitle; PDF metadata; slide 1; topic proposal
Research gap	Ch. 1 Problem Statement; Ch. 2 contradictions table; defense slide 3
Conceptual framework	Ch. 1 Fig. 1.1; Ch. 3 Methodology Charter; slide 5; Identity Lock above
H1–H6	Ch. 1 Doctoral Research Framing Summary table; slide 7; Ch. 4 Hypothesis Verdict table; Q&A guide
One-sentence identity	Slide 18; Q&A guide; Identity Lock Section 4
Final doctoral claim	Ch. 5 Section “Final Doctoral Claim”; slide 19; Identity Lock Section 5
Maturity Framework	Ch. 1 RGAIG Maturity table; slide 9; Ch. 5 Section “Practical Artifact”; Architecture Pack mapping

If any location above shows a different statement than the locked version on this page, that location is wrong — the locked statement on this page is authoritative. The five locked statements together define the dissertation’s identity and the candidate’s defense response across every artefact.
