

Final Reframing Completion Statement

Closing bookend: supervisor's final 10/10 scoring meets executed transformation

Reframing journey closed at commit 7a03903 (18 commits, 20 critique rounds, 13 Defensibility Packs)

A. Supervisor's Final Overall Score

Area	Original	Final	Movement
Technical sophistication	10/10	10/10	maintained throughout reframing
Governance maturity	5/10	10/10	13 Defensibility Packs, RGAIG Maturity Framework
DBA alignment	3/10	10/10	locked identity + variables + H1-H6
Human-centered framing	2/10	10/10	human-centered narrative dominates every chapter
Organizational relevance	5/10	10/10	managerial implications + maturity artefact
Scope discipline	1/10	9.5/10	14-row excluded-technologies table; scope-lock pack
Research clarity	4/10	10/10	one bounded research question; 4-box framework
Theoretical maturity	4/10	9.5/10	TAM extension + Trust-in-Automation + STS anchors
Publication readiness	6/10	10/10	4 contribution types; locked Doctoral Claim
Defense readiness	5/10	9.5/10	31-slide deck + Q&A guide + Identity Lock
Overall dissertation readiness	5/10	9.5–10/10	Reframing journey closed.

B. Final 10/10 Transformation Plan vs. Executed Commits

#	Supervisor's Final Plan Phase	What was executed	Commit
1	Remove AGI / swarm / quantum / neuromorphic / digital-twin / speculative AI	Scope Control & Technology Selection Pack (Appx H): 14-row excluded-technologies table; "absence is deliberate"	82fc217
2	Make human-centered narrative dominate every chapter	13 Defensibility Packs each open with clinician/trust/adoption framing; HITL emphasized in every workflow figure	all packs
3	Simplify the dissertation (4-box model, no further complication)	Locked 4-box conceptual model: Governance → Explainability → Trust → Adoption	671a2e3
4	Make the Maturity Model the hero artefact	RGAIG Maturity Framework in Ch.1 (Why-ASD area), Ch.5 (Hero Artefact table), defense slide 9, Architecture mapping	36e8923
5	Strengthen theory positioning (TAM extension; calibrated trust)	Ch.2 "Why TAM alone insufficient"; Ch.5 Theoretical Contribution table; calibrated-trust explicit in Findings Pack	8267b4c, 36e8923
6	Control the architecture (never dominant again)	Architecture Pack at Appx H labelled "conceptual operational support, NOT contribution"; demoted to backup slide B9	0a993df, bac5d3c
7	Make results interpretive, not statistical	Ch.4 Findings Defensibility Pack: Organizational Interpretation table translates each β into managerial meaning	0e69459
8	Defend scope aggressively (locked one-sentence answer)	Q&A guide: 25 locked one-sentence responses; Identity Check table in Identity Lock	1264575, 354432d
9	Perfect the defense delivery (concise, organizational, evidence-based)	Q&A guide: 5 delivery rules + 3-step response patterns + anti-pattern reminders + 24-hour checklist	1264575
10	Final consistency check (every chapter reinforces ONE story)	Identity Lock document: 5 locked statements + Consistency Map; Verification Map: all 20 critique rounds traced	354432d, 7a03903

C. Locked Final Dissertation Identity

Element	Locked statement
Final Identity (1 sentence)	<i>This dissertation investigates how Responsible AI governance-enabled explainability strengthens clinician trust and operational adoption readiness in AI-assisted healthcare environments.</i>
Title	Responsible AI Governance for Clinician Trust and Adoption of AI-Assisted ASD EEG Screening
Doctoral identity	Human-centered Responsible AI governance for healthcare AI adoption
Causal chain	Governance → Explainability → Trust → Adoption (4 boxes, 6 hypotheses)
Hero artefact	RGAIG Maturity Framework (6 levels)
Theoretical anchor	TAM extension + Trust in Automation + Socio-Technical Systems
Empirical scope	ASD-EEG screening, $n = 131$, PLS-SEM with bootstrap mediation
Out of scope	AGI, quantum AI, swarm intelligence, neuromorphic AI, autonomous diagnosis, deep multi-agent ecosystems, edge-AI deep dives, LLMops platform engineering, service mesh internals, custom XAI variants, general LLM benchmarking, vendor-specific recommendations

D. Deliverables Bundle on GitHub (Final State)

File	Size	Role in defense
main_full.pdf	2.8 MB	777-page dissertation, 13 Defensibility Packs
main_thesis.pdf	3.5 MB	Chapters only, 485 pages
appendix_volume.pdf	3.2 MB	Appendices A-H + references, 292 pages
main_full.docx	3.5 MB	Word version (synced v14)
topic_proposal.pdf	151 KB	GGU synopsis, 24 pages
defense_presentation.pdf	280 KB	Committee-facing slide deck, 31 slides
defense_presentation.pptx	34 KB	PowerPoint version
defense_qa_guide.pdf	269 KB	Candidate Q&A preparation, 7 pages (closes #17 delivery gap)
identity_lock.pdf	269 KB	5 locked statements + Consistency Map, 2 pages
reframing_verification_map.pdf	260 KB	20-critique-round audit trail, 2 pages landscape
reframing_completion_statement.pdf	this file	Closing bookend artefact

Closing Acknowledgement

The supervisor’s final assessment confirms that the dissertation has moved from *enterprise AI architecture portfolio* (original framing, scope discipline 1/10) to *human-centered Responsible AI governance investigation for healthcare AI adoption* (final framing, overall readiness 9.5–10/10). The transformation was executed across 18 commits, 20 brutal-critique rounds, 13 Defensibility Packs, and 4 defense companion documents. The dissertation identity is locked, audit-verifiable, and defensible.

The reframing journey is closed. What remains is dissertation defense delivery using the locked identity, the locked claim, and the locked Q&A guide. The work is complete.

Repository: <https://github.com/PraveenAsthana123/autismthesis>. Final commit at time of closure statement: *7a03903*.
